## Quality in everyday life

Research, style and beauty, all in one stroke, the Foster brand.

The desire to find new solutions to improve the experience and enjoyment of one's kitchen, is what drives our research, and the source of our satisfaction. We have reached important goals in developing household appliances, and with the same enthusiasm we share and develop ideas with the most important kitchen manufacturers in Italy and worldwide.

This is the Foster philosophy: excellence in quality standards, great manufacturing craftsmanship, ever innovative solutions interpreted with our signature style and taste.

## Who we are

Founded in 1973, Foster is an Italian company with four highly specialized manufacturing plants, active in more than 50 countries worldwide. It is an integrated organization with headquarters in the historic “Terranova palace” in Brescello, a small village known for the movies starring Don Camillo and Peppone, and a symbol of the countryside of northern Italy.

## Inspired by art and culture

The Terranova palace is not just a building; it is the expression of Foster's love for art. Foster established its headquarters here in 1988, after the renovation of the former 17th century Franciscan convent. The restoration brought back the splendour of the prestigious frescoes and unearthed ancient historical artefacts.

The Terranova palace is a cultural heritage that the company presents to the community in all its glorious history, beauty and magnificence.

Foster was among the first Italian companies to join projects for environmental preservation and protection, and the building is now under the protection of the "Monuments and Fine Art Administration".

# FOSTER Collections

A modern, black gooseneck faucet with a textured, cylindrical body. The faucet has a curved spout and a single-lever handle. The brand name "Foster" is visible on the handle. It is mounted on a stainless steel sink.

A clear glass teapot with a handle and a lid. Inside the teapot, a black tea ball is suspended by a string. The teapot is placed on a grey countertop.

The wall behind the kitchen features a decorative border with a repeating floral pattern in yellow and gold. Below this is a horizontal band with a repeating geometric pattern of white triangles. The wall is painted in a light, neutral color.

A stainless steel gas cooktop with four burners. The burners are black and have metal grates. The cooktop is set into a grey countertop.

A stainless steel sink with a black interior. The faucet is mounted on the right side of the sink. The sink is set into a grey countertop.

# PVD Collections

# PVD treatment

It's obtained by a physical - not chemical - process, with a resistance superior to that of any other treatment.

## PVD Stainless steel features:

- exceptional superficial hardness
- more resistance against wear and abrasion
- more resistance against corrosion, solvents, detergents, high acidity food
- unalterable by UV rays
- eco-friendly
- hypoallergenic treatment

# Respectful of your health and of our environment

The PVD treatment is totally **hypoallergenic**, and used in many applications for products which come into contact with the skin and with food. An additional safety for our health.

PVD steel is **100% green**. The manufacturing process does not release any harmful substances, and the product maintains all the qualities of stainless steel concerning eco-sustainability; it remains totally recyclable, and therefore fully environmentally friendly.

# Vintage Collection

A stainless steel surface  
with no fear of wear  
and tear.

# The well-worn stainless steel.

Vintage is an exclusive Foster finish whose main feature is the specific asymmetrical brushing, which mimics the wear and tear of time.

This finish is obtained completely by hand, and is now proposed on a wide range of products, to offer you a large choice of matchings.

The Vintage finish is available on sinks, cooker hobs ovens and worktops, so as to offer a distinctive feature for the whole kitchen.

The Vintage finish is available also in combination with the sophisticated PVD colours. Discover the range in the section PVD Collections.

# Designer finishes by Foster

- the best match of LOOKS and FUNCTIONALITY
- the best easiness of CLEANING and BRIGHTNESS over time

 Foster finish

## Foster brushed finish

The steel is treated with special natural fibres that give it the characteristic extrafine satin finish that is highly elegant and functional. **This makes the surfaces very smooth and easy to clean.**

## PVD finish

**NEW**

A new look for the classic, exclusive AISI 304 steel, thanks to the innovative PVD physical treatment (Physical Vapor Deposition). This allows the deposition of precious metals on steel surfaces, giving a unique look and greater resistance to scratches and wear.

Available in Gun Metal, Gold and Copper finish.

## Vintage finish

**NEW**

An artificially worn look, along with the convenience of a steel surface that is not afraid of scratches and nicks.

The asymmetric brushing obtained with traditional methods simulates the signs of aging and gives the steel a new and original appeal.

# Beyond built-in... where and how you want.

The methods with which worktops can be built-in have become increasingly more varied and customized. Foster was the first sink manufacturer to have researched and used the new recessing methods and has thus acquired a great deal of experience. It now offers the most comprehensive range available on the market, with flush-mount, flat-edge and undermount installation.

**Standard**  
Traditional built-in with the vertical, 8-mm edge.

**Q4**  
The casing has a square edge that stands on the work surface by just 4 mm. Great solution to match the sink with the ceramic glass hobs (Induction).

**Flat-edge**  
An original edge, with an inclined, 3 mm high profile, matching an extreme elegance with the easiness of installation.

**Flush-mount**  
The product is sunk in 1,5 mm deep recess thus being perfectly flush with the worktop. As alternative, it can be installed on the worktop as well.

**Undermount**  
A classy and contemporary idea, to be installed under the worktop; available in various types of sinks, with soft or square design.

**Built-in**  
Almost the whole range of Foster sinks can be integrated into stainless steel worktops; it is the most elegant and professional solution, that creates a seamless work-surface.

## Flush-mount & Flat-edge: a clarification to be done

Many manufacturers indicate as Flat-edge a Flush-mount edge mounted on the worktop.

For Foster Flat-edge means a real alternative built-in solution with an elegant 3 mm sloping edge.

In any case, Foster's Flush-mount models can be mounted on the worktop (FT), thus offering a further built-in solution (FTS).

# Features

## Sturdy sinks

For every type of sink (welded or single-moulded) and price bracket, Foster works with above-average steel thickness when compared to other manufacturers. As a result, also owing to our long experience, we are able to construct “sturdy” sinks displaying a unique design.

## Spacious bowls

Thanks to the pioneering manufacturing technology used, all the bowls in Foster sinks provide a generous depth (even the single-moulded versions, i.e. formed from a single sheet of steel). The bowls in many of the versions are more than 20 cm deep, thus sizeable and practical for all washing operations.

## Bowls with tight radius

Bowls with squared-out shapes, a modern design and more capacity. Foster proposes a wide range of choices with different manufacturing technologies and corners with different radiuses.

## Mixer tap holes

On many Foster sinks the ample tap area is already provided with two tap holes. Many sinks can be customized with on-demand additional holes, to be requested on the order. These can be used for taps requiring two holes, for automatic waste fittings or for soap dispensers. This feature is marked on the drawings by means of a dotted outline.

## Diamond-shaped bottom

The water drainage on the bowl's bottom is an important feature, always well cared for on Foster sinks. In the squared-out, flat-bottomed sinks, the draining is ensured by the elegant diamond-shaped creases that make the water flow easier.

## Waste fittings

Foster sinks are equipped with a generously sized 3.5" waste fitting and practical strainer plug that prevents solids from flowing away with the waste water. The 3.5" drain allows the Foster waste-disposer, which is compatible with all models, to be used. (Compatibility with the waste-disposer of other manufacturers is not guaranteed).

## Waste fitting with remote control

The waste fitting with remote control is part of the standard equipment supplied with some of the models. A very convenient accessory that saves you from wetting your hands when the bowl needs emptying (see page 148).

## Perimetric overflow

The overflow safety, present on all Foster sinks, avoids any spillage of water in case the tap is inadvertently left open. The new perimetric solution available on some models improves the look thanks to its squared-out and essential shape.

## Space-saver

A feature that optimizes the use of the under-sink space, which is more and more important due to recycling practices. This feature is standard on some models but always possible also on any other model by ordering specific waste fittings and siphons as accessories (see page 148).

## <sup>1</sup> Types of installation

Many Foster sinks are available in a variety of versions (Standard, Flush-mount, Flat-edge and Undermount) that can have slightly different dimensions. Therefore we recommend to check the specifications besides every version. The built-in type to which figures are referred is always specified under the drawing.

## <sup>2</sup> Cabinet

"Cabinet" refers to the smallest standard element of a modular kitchen in which a sink can be fitted in. In some cases you may find a double standard:

**(B)** for fitting in top at least 40 mm thick, consider the smaller measure, as indicated in parentheses (e.g. page 77);

**(T)** for fitting in the beginning/end of composition, consider the bigger measure, as indicated in parentheses.

For special fittings that require extra adaptations to the furniture, please refer to the kitchen manufacturer.

**Please note:** the listed cabinet sizes refer to the bowls' encumbrance and do not consider the fixing brackets, which can change in any given installation. Please also refer to the kitchen manufacturer's know-how for specific installations which may require some customization on the cabinets.

## <sup>3</sup> Right-hand, left-hand and reversible sinks

The double code for a single model indicates that both right-hand and left-hand versions are available. The right-hand version (rh) refers to a sink with the bowl (or bigger bowl on models without drainer) on the right. Left-hand versions are identified by the code "lh". The single code indicates that the sink is reversible, or that only the version shown in the picture or drawing is available.

## <sup>4</sup> Accessories

Always striving to blend aesthetics and functionality, Foster devotes special attention to its products' Accessories. This catalogue places special emphasis on the optional features indicated below each model, to facilitate identification of the proper combinations.

## <sup>5</sup> Mixer tap holes

In the drawings standard tap holes are shown with continuous line. Further possible holes on request, in order to install the automatic waste fitting and the dispenser, are shown with a dashed line. For some models, customization with additional holes can be done with some extra costs.

# Foster Milano

AN INNOVATIVE CONCEPT OF FUNCTIONALITY

SPACE drain

Perimetric overflow

Space saver drain

# Foster Milano

A large square bowl: all that space that is needed, both as sink and working area.

Thanks to the steps on the edge, the sink can be configured in many different ways.

These steps can accommodate many practical accessories.

The grating kit is a practical element that can be fit into its specific chopping board.

The handy plastic bowls complete the working set.

The stainless steel colander is functional and hygienic.

The ample workspace allows to arrange the accessories side by side.

Grids can be placed on the bottom too: more hygiene and protection for the bowl.

The sink can perform a disappearing act and become a seamless workspace.

### Three steps system

The sink has an ingenious design that makes it simple to use a large set of optional accessories. On the topmost supporting step, the Black grids slide, creating a large surface to rinse food.

### Complete range of accessories

The second step is meant to support and allow the sliding of a complete combination of accessories, which make some operations practical and safe: rinse, drain, slice, grate...

### Protection grid on the bottom

Black grids can rest on the step on the bottom also, making it possible to rinse foodstuffs without their coming in contact with the bottom of the sink, which may be dirty.

Standard fittings: fixing brackets, gasket (not available for under-mount sinks), waste fitting, overflow and siphon. Packing: single carton box.

The practicality of a large and spacious bowl and of an essential and elegant drainer that, above all, is easily cleanable and makes it easy to drain water.

The supplied grid lies on the bottom to prevent food from getting in contact with potential remains that may be present on the sink's surface.

Various modular and sliding accessories can be placed on the double guide rail. On the inner rail, a plate rack and a precious colander are housed.

The Black grid is located on the external rail. It is on the top of the sliding accessories and becomes a practical support and rinsing area.

An additional range of cutting boards and other accessories can be combined with the grids to complete your workstation.

The Black grids completely close the sink, turning it into a design object: the certainty of an always tidy kitchen.

# GK

**Different corners for better hygiene**  
The squared vertical corners match to the soft bottom hygienic ones. The diamond design on the bottom ensures the optimal water flow.

**Remote control**  
In the flush-mount and flat-edge models, a remote control to open the drain without dipping hands into the bowl is also included.

**Elegant SPACE drain**  
The elegant SPACE steel cap, included in all models, closes the drain and leaves no visible residues collected in the basket below.

**Space-saving drain and siphon**  
The GK sinks are equipped with space-saving drain and siphon allowing the optimal use of the under-sink space.

**Perimetral Overflow**  
The attention to detail and the minimalist design can also be found in the original perimetric overflow that enhances the bowl.

**Practical inclined containing area**  
The inclined containing area is the joining element between sink and hob, creating a classy combination, functional in use and cleaning.

**An original set of accessories**  
For all the GK models a complete set of optional accessories is available. These fit perfectly in the spacious bowl and transform the sink in a complete and functional working area for the preparation and washing of food.

Standard fittings: fixing brackets, gasket (not available for under-mount sinks), waste fitting, overflow and siphon. Packing: single carton box.

The Stripe sinks are characterized by the original and elegant striped drainer, which is at the same time support zone and water drainage area. The cutting board recalls the motif of the sink.

The sink with the 75 cm wide bowl is supplied with a practical accessory: the knife holder. An element that is coherent with the concept of a sink as a workstation.

### Three steps system

The sink has an ingenious design that makes it simple to use a large set of optional Accessories. On the first supporting step, the topmost one, the Black grids slide, creating a large and practical surface to rinse food.

### Complete range of Accessories

The second step is meant to support and allow the sliding of a complete combination of Accessories, which make some operation practical and safe: rinse, drain, slice, grate... everything can be done inside the sink.

### Protection grid on the bottom

The third supporting step is on the bottom of the bowl. On this step rest the Black grids, making it possible to rinse foodstuffs without their coming in contact with the bottom of the sink, which may be dirty.

# KE PVD & PVD Vintage

**Gun Metal, Gold, copper.** The new KE Colour finishes are obtained with a special surface treatment (**Physical Vapour Deposition**) that gives AISI 304 stainless steel the fine colour and a subtle sheen in addition to very high physical and mechanical characteristics.

In particular, the treatment gives the steel a higher **resistance to corrosion**; it also increases the **surface hardness**, and therefore obtains a greater **resistance to scratches**; it reduces surface friction and **improves water flow** and **temperature resistance**.

# Sinks' Accessories

An ever richer set of Accessories characterizes the washing proposals. All models are accompanied by cutting boards, trays, drainer racks and colanders that enrich the aesthetics and functionality of the sink.

## Twin chopping boards

The Twin chopping boards are much more than simple cutting boards. Combined with baskets and colanders, they become space-saving multifunction systems. In the photo, the L3 chopping board is coupled with the dish drainer grid (T) and the colander (Z).

# Sinks' Accessories - modular sets

Space and time are increasingly precious elements in the kitchen.

This is why Foster has studied integrated Accessories' systems that optimize your every one movement, and occupy the bare minimum space when not used.

## The large bowls ... multi-Accessorieszed

The Foster range is particularly rich in sinks with a large single bowl. From a functional point of view this is indeed the optimal solution: a single large basin that can hold dishes and objects of considerable size, equipped with trays, baskets and cutting boards that make the work area flexible and perfectly functional.

In the photo, the N2 cutting board is accompanied by the O2 tray and the T1 grid, to form a complete set of great elegance.

## A multipurpose kit

The Twin N3 HDPE cutting board combines with the new P2 kit to house graters and the underlying containment tray. Other Accessories can be inserted in the outer ring of the cutting board, such as the dish drainer basket T2 or the colander tray Z2.

## SPACE automatic waste fittings features

Designed for deep bowls, Space has a very small encumbrance. In the drawing the side view of the Space is shown. The height of the compact drain and the conformation of the siphon optimize the area under the sink leaving the necessary space for the needs of separate waste collecting.

The Space cap collects food residues in the flexible neoprene basket below, very easy to clean.

The new Space Light and Push automatic wastes are even more comfortable and allow the opening of the drain with a simple touch of the hand.

## Notes on compatibility of automatic drains

Automatic drains are compatible with sinks that are supplied with at least one second hole (in addition to the tap hole).

For many sinks this is not a standard feature but it can be requested when ordering it. In the sinks drawings standard holes are shown with a continuous line, while positions for any holes on request are shown with a dashed line (see example below).

For undermount sinks the possibility of insertion of the automatic drain is always shown because the hole can be positioned on the worktop. It is also recommended to check the type of the overflow of the sink in order to choose a compatible automatic drain.

Second and third tap hole available

For installation on the worktop all the automatic waste fittings require hole Ø 35 mm.

# Special solutions

**Eclipse, Drop, Arsenio and Flat** are four **ideal "under-window" solutions**. The barrel can be easily lowered to reduce the height of the tap to just a few centimetres.

**Magnum** mixer tap is ideally **suited for a professional use**. The flexible hose makes it possible to reach every corner of the sink and the lever positioned directly on the shower makes it extra-easy to control the water flow.

**GK, Play, Tube, Milanello, Skin and FL** offer a particular appealing aesthetic with their big arch. **The mixer shower can be tilted** and the waterflow directed where needed.

The **Gamma 3 Vie** mixer tap allows the distribution of cold/hot water and filtered water for alimentary use. This function is possible thanks to a third independent pipe that can be connected to any water-conditioning system.

A whole new look for the **Omega, Omega Plus and Skin** mixer taps, thanks to the physical PVD treatment (Physical Vapor Deposition). This technology uses precious metals to colour the steel surface and improves the resistance to scratches and wear and tear. The **Gun Metal, Gold and Copper** mixers are the natural complement of the KE bowls of the same colour.

## Features

Foster offers a complete and varied collection of mixer taps both for their aesthetics and functional characteristics, and able to give added value to the wide range of sinks. The essential and modern design of squared proposals alternate with the more traditional models with soft and sinuous aesthetic. The remote controls and dispensers (see Sink Accessories section), reproduce perfectly the design of mixer taps, creating sets of high aesthetic value.

### Quality materials

Foster mixer taps meet the strictest regulations. Certified materials with very low lead content and flexible ceramic cartridges tested at very high pressures provide high sturdiness, an always smooth and precise working and, most of all, full safety.

#### Inox AISI 316

Made in AISI 316 stainless steel, which guarantee a perfect resistance to corrosion and maximum hygiene and safety, even for food use water.

#### Double water flow

Several models are equipped with a switch to easily change the flow from continuous to shower.

#### Tap rotation

All the taps have a wide angle of rotation. Some models even permit a full 360° rotation.

#### Extractable shower head

The head of the tap is extractable, in order to easily reach any area of the sink.

#### Collapsible barrel

A feature that makes it possible to design the sink area in front of a window, thus being able to enjoy the natural light.

#### Strengthening plate

Foster's mixer taps are equipped with the strengthening plate that offers perfect stability on any sink.

# The advantages of the induction technology

## Control

Great versatility and accurate control are peculiar features of induction cooking. The nine possible power settings (with additional Powerboost options) offer a wide spectrum of possibilities, ranging from simple food heat maintenance to an incredible net available power compared to other cooking systems.

## Security

The surface of the hob is heated only by pot contact and reaches no searing temperatures. Moreover, the simple act of removing the pot automatically shuts off the hob. The sophisticated electronics of Foster hobs completes their equipment in terms of security systems thanks to Pot Detector, Overflow Detector, Automatic Power-Off and Safety Lock.

## Cleaning

The cooking area is activated only on the surface directly in contact with the saucepan; the rest of the cooking area remains cool, which means that over-spilled food will not burn and will not produce unpleasant deposits that are difficult to remove. Cleaning is so simple and fast and hygiene is perfect.

## Energy saving

Thanks to its great speed in bringing the liquid to boil and its efficiency highly above all other cooking systems, induction involves a significant energy saving and represent **the most economical choice**.

## Absorption examples for different types of cooking

cooking levels	power	kind of cooking	examples
1-2	50-130 W	very light	melt, bain-marie
3-4	150-300 W	light	warm, simmer
5-7	350-750 W	medium	sauces, rice
7-9	1.000-2.300 W	intense	roast meat, fry
Powerboost	1.400-3.000 W	time reduction	liquids boiling

The induction high power level leads us to believe in a great commitment of energy. By contrast, as can be seen in the table, most types of cooking require low power.

## Built-in solutions

Induction and electric hobs can be installed either on the top or with the flush-mount method, by creating a recess in the worktop the same depth as the thickness of the glass.

### Bevelled edge

Special slanting edge (bevelled) that gives a clean and elegant finish with both the installation methods (flush-mount and top-mount) and perfectly matches the flat-edge sinks.

### Vertical edge

The casing has a square edge that stands over the work surface by just 4 mm. The vertical ceramic-glass profile allows both top-mount and flush-mount installation.

# New Bridge technology

## Extended cooking area

The new hobs with Bridge function allow to associate two zones forming a single extended cooking zone for pots of large size, or for more than one cooking simultaneously, with maximum flexibility in pot positioning. With the additional Double Booster feature provided by all Bridge hobs, the exceptional 3700 W power can be concentrated on a single plate or made available uniformly over the enlarged area.

## Features of Foster Bridge technology

The innovative rectangular shape of Bridge induction plates provides maximum efficiency over the entire cooking area. The possibility of dosing the entire power on individual plates or on the whole surface, allows the best performances both with pots of large and small size. Activation of the Bridge function is intuitive and straightforward: the entire area is then managed with a single Slider controls.

# PowerControl

PowerControl function allows the use of induction technology also in case of household maximum power as low as 3 kW. The maximum power can indeed be self-limited to the desired level to a minimum of 2.8 kW. Once the maximum power is set, we can forget about the absorbed energy because Foster induction hob will give us a warning about possible limitations, allowing to choose how to allocate the available energy. The hob can be easily reprogrammed at any time to modify or remove the power limit.

# The control of a real pro

## T-chef

It is a function that allows to set particular temperatures (42 °C, 70 °C, 94 °C) and keep them constant during cooking. Elaborate preparations can be easily obtained, with chef-like results. Cooking in a bain-marie, without the aid of a double container for the water, custard or cream sauce will thus always be perfect. By setting the temperature close to boiling, liquids will immediately reach the requested temperature, increasing speed and performance.

## Powerboost

Foster induction hobs are equipped with Booster function [P], which provides increased power to the selected plate. In particular, when the Booster is activated, the plate works for ten minutes at a very high power that allows to heat quickly large quantities of water.

Quantity	Without Powerboost	With Powerboost
3 litres	5 min.	3 min.
5 litres	8 min.	5 min.

Boiling timing with or without Powerboost

## Slider control operation

The Slider control allows for extremely quick temperature setting: with a light touch of the finger you may select the desired power level on the TOUCH display.

## Full Safety System

All electric cooker hobs feature the most modern and sophisticated safety protections: **Centralised power-off function**; Child-proof **safety lock**; **Residual heat warning lights**. Induction models feature the following functions: **Safety System** that turn off the hob in the absence of the pot; **Overflow detector** that automatically turns off the plate in case of liquid overflow; **Automatic deactivation** to prevent accidents caused by forgetfulness.

## Pot Speed Test **NEW**

This feature tests your pots, grading them from 0 to 3 for efficiency and heating speed.

## Pause

Useful function that allows you to distract your attention from cooking, interrupting and restoring the settings immediately.

## Heat maintenance

Function that allows the food to be kept warm gently (70° C), without reaching boiling temperatures or risking to burn the sauce.

## Intelligent Pot Localization **NEW**

This feature recognizes the cooking area onto which the pot is set, and activates the suitable commands to regulate its power.

## Double Powerboost

On the new models with Bridge technology the Double Booster function is available: two further levels of power up to 3700 W, to be used on a single zone or distributed over the entire Bridge-extended area (where available).

## End-of-cooking programming

All operations are programmed by means of the touch-control on the glass itself. Each cooking plate is capable of independent programming, and thus the possibility to set different cooking times.

## Timer

On several models a further timer, independent from the end-of-cooking function, is available.

## Pot detector

All induction cooker hobs detect the pot resting on them, but they also calculate the area they cover. This system allows the energy to be used even more efficiently. Moreover, the plates switch off automatically when the pot is removed.

## Smart Fan System

Correct ventilation is essential for the induction hob to function in the best possible way. The Foster system automatically regulates the amount of ventilation to suit the temperatures reached.

## Go&Stop device

This device initially turns on the plates at maximum power until the selected temperature has been reached.

## Automatic Bridge **NEW**

When a pot comes to rest onto two different cooking areas, this feature automatically activates the bridge function to unite them.

## Recall

This feature allows you to call back the last settings selected in the previous cooking.

# Foster Milano Air

FIRE AND AIR TOGETHER, IN A++ ENERGY CLASS

**A++**  
CLASS

## Six aspiring speeds

Six suction speeds and an airflow up to 680 mc/h guarantee a powerful and effective suction in all situations.

## Overspilling water security

The containment bowl under the grid can contain up to 1,5 litres of overspilling.

## Smooth surface

The hob is perfectly flush, even in the suction area. The whole space is available to slide the pots around in perfect safety.

## Easy access to filters

The ergonomic shape of the grid allows easy access to clean the filters.

## Double Bridge zone

Milano Air offers two ample extended cooking zones through Bridge function.

## Intuitive control

The touch-control panel manages in an easy way both cooking and suction.

\*\* The professional filter can be regenerated multiple times

**Remark:** canalization for air extraction and plinth masking grille for the kitchen plinth are available upon request.

Filtering configuration with under-grille carbon filter (9700529) and plinth mask (9700539).

Filtering configuration with plinth filter (9700574).

**Space saving**

The installation of the Foster Milano Air hob is easy and flexible. The shape of the hood leaves ample space under the cabinet, allowing to install two spacious drawers. The motor, which is installed on the ground under the cabinet's floor, can be rotated in order to facilitate the air extraction in the suitable direction.

# S4000 Induction Bridge

THE FUNCTIONALITY OF AN EXTENDED COOKING ZONE

Features	Version	Ref.	Technical Drawing

power supply:  
single-phase 230V~1P+N  
frequency 50+60 Hz

Induction cooker hob  
steel surface;  
2 independent cooking areas A and B;  
9 power setting per zone;  
Bridge function;  
electronic programming;  
touch-control; recall;  
2 slider controls;  
2 independent timers;  
pause; security lock;  
electronic temperature control from 50° to 220°C;  
Pre-set temperatures to: cook meat, cook fish, cleaning.  
Accessories: spacer (see page 203)

7325 455

**Max power 2.800 W**  
2 cooking zones 2x1.400 W

Dimension: 380x520 - cut-out: 360x490

## Perfect match

S4000 Domino Gas  
See page 228

S4000 hobs can be put in sequence with **Domino Air** and **Domino Ghost** table suction hoods for an exclusive matching and effective suction.

# S4000 Domino

Finish	Ref.
--------	------

## Spacer for Domino elements

**Stainless steel** 8320 000

The stainless steel jointing profile, allows the various Domino elements (vertical edge) to be coupled together with wide distance.

Dimensions: 30x520 mm  
Thickness: 4 mm

Also available in "taylor-made" version (on request), the spacer allows to increase the space between Domino elements, thus creating a practical working surface.

## Notice on installation in modular continuous solution

### Installation with separate cut-outs

For proper continuous installation a distance of 20 mm among the products cutouts should be maintained (with the exception of a 18 mm distance between the hood and another product). To ensure the vertical alignment of the products we recommend a unique cut-out depth of 500 mm, regardless what is mentioned in the user's manuals (480, 490, 500 mm, depending on model).

### Installation with single cut-out using spacer

By using spacers you can install products in a single cut-out of 500 mm in depth and in length equal to the sum of dimensions of products and spacers, decreased of 20 mm. In the following example, from links: (380 +30 +30 +380 +120 +450 +30 +30 +400) mm-20 mm = 1830 mm

S4000 Domino is configured as a Q4 built-in. However, due to design constraints, some products have a slightly greater thickness. This produces a small step between the products when installed in continuous: Teppan, Wok and hood. For proper evaluation refer to each model drawings which give the exact thickness.

\*\*with the PowerControl function, the maximum power can be set at any time among the following values

## Connection of the Modular system

### Elements' placing

The Modular system allows a free placing of its elements. The only limit is posed by the length of the cables which connect the different elements to the connection box: 60 cm between touch-control unit and connection box and 90 cm between cooking plates and connection box.

### Combination of cooking plates

The system can be assembled freely; some combinations that are not possible are highlighted in the remarks concerning the Touch control modules

### Connection box

The set-up is easy and intuitive. The box can be placed on the wall behind the cabinet or inside it, under the countertop.

# Modular and Modular Quadra Induction Series

## Maximum freedom

Modular Induction is a new Foster proposal that offers full freedom to compose your induction hob according to the available space and your specific needs.

## Countless possibilities

The three models of hobs, different for diameter and power, can be positioned with great flexibility in combinations of two, three or four zones controlled by their own touch controls.

## Intuitive installation

The installation is quick and easy thanks to the connection box, easy to fit under the worktop, which connects the plates to the touch controls.

## Matching to your style

Modular Induction is available in black or white version, for a perfect harmony with your worktop and your kitchen.

# Modular Induction Series - touch control module

Touch controls module; Slider function; electronic independent programming of cooking zones; 9 power setting per zone plus Powerboost function; Slider control; touch control; go&stop device; safety lock;

to be ordered with matching connection box  
Connection cable length: 60 cm

*Note: the touch control module requires a simple configuration, depending on the combination of plates associated, as indicated in the installation manual.*

power supply:  
single-phase 230V~1P+N  
two-phase 400V~2P+N  
frequency 50÷60 Hz

Dimensions: 275x150 mm R75  
Flush-mount cut-out: see web site

# High efficiency coupled with environmental awareness

High efficiency coupled with environmental awareness. Foster offers a broad and modern selection of cooker hobs that are tailored to various space-related needs and implement special technological features for guaranteed energy saving. The new cooker hobs feature high-efficiency burners that allow a gas saving from 20% to 25% when compared to traditional hobs.

### High Efficiency burners (AEO): 5kW and 25% gas saving

Energy efficiency is a plus offered by the research of Foster. Thanks to the new AEO burners cooker hobs have a maximum efficiency rate of 69% and the DUAL AEO burner reaches a maximum power of 5 kW. The brass burner ring gives a professional look.

### 3rd series burners: 20% gas saving

They guarantee a much higher efficiency compared to the European standards. The locking system between flame-spreader and cap ensures a perfect positioning and easiness of cleaning.

### Dual burners: from 300 to 4.500 W

Innovative and versatile burner, with triple crown ignited independently by a single knob. Power delivery from 300 to 4500 W.

### Flat burners with PrecisePower system: great control in flame-settings

Maximum precision in regulating the flame, thanks to the 10 pre-set levels of the PrecisePower system. And as a benefit, the nice and ultra-low look of the new Flat burners.

# Features

## Safety in the kitchen

The ultra-rapid latest generation thermocouples make the burners even safer while the ignition time is reduced to the minimum.

### Safe cooking

Foster hobs are equipped with safety valves. They shut off the gas supply very quickly if the flame accidentally goes out.

### Under-knob ignition

The utmost freedom of movement with electronic under-knob ignition allows a one-hand ignition of the burner.

### Ultra-flat

Design meets functionality in the the ultra-flat models. Elegant grids that form a generously sized overall surface.

## Grids

All Foster cooker hobs are equipped with cast-iron grids, a perfect material for this use, thanks to its many properties.

### Pure elegance

The cone-shaped hobs raise up from the surface, evoking the power of fire. The grids surmount the burners, leaving the hobs surface “free.”

### Cast-iron grids

All the hobs are equipped with cast-iron grids, a perfect material due to its many properties: high thermal capacity; weight and stability that improve safety; sturdiness which keeps their look unaltered over time; easiness to clean.

### Practicality

A deep and inclined containing area cradles the burners and cast-iron grids, which form a continuous workable surface. The inclination of the containing area's edge, makes it very easy to clean, also in corners.

# Features

## Beyond built-in

Foster has been the first manufacturer to search for new built-in solutions, and has today a vast experience and the most complete range of flush-mount and flat-edge products.

### Standard

Traditional built-in with the vertical, 8-mm edge.

### Q4

The casing has a square edge that stands outside the work surface by just 4 mm.

### Flat-edge

An original edge, with an inclined, 3-mm high profile, matching an extreme elegance with the easiness of installation.

### Flush-mount

The flush-mount cooker hobs have no vertical edge, and must be sunk into a 1,5 mm deep recess in the worktop's surface.

### Built-in

Almost the whole range of Foster cooker hobs can be integrated into stainless steel worktops; it is the most elegant and professional solution, that creates a seamless work-surface.

Foster Milano

# Foster Milano

FORMAL PURITY, PROFESSIONAL PERFORMANCE

 **High-Efficiency burners.**  
Up to 25% energy saving

## Flexible installation

The Foster Milano hobs are available with several types of edge: flush-mount (FT), top-mount in the elegant version with (Q4) edge, or also by installing the flush-mount version as top-mount (FTS).

## XXL Grids

The weighty enamelled cast iron grid has extraordinary dimensions, 33x25 cm, with a working surface up to 50% bigger compared to a standard cooker hob.

## Ultra-flat surface

The cast-iron grids form a seamless surface jutting just a few millimeters from the hob, on which one can move pots around with great ease and in perfect safety.

## High efficiency burners

The AE burners guarantee up to 25% energy saving compared to standard burners. All models are designed with at least one wok Dual burner of 4.2 kW.

## Cast iron wok support

All the Foster Milano cooker hobs are equipped with a precious cast iron wok support, that allows the safe use of rounded pans.

## Foster Milano knob

The precious satin-finish metal knob, is the defining element of the entire series. It is present on the cooker hob, on the oven and even graces the tap area of the sink.

Thanks to the powerful and versatile AE Dual burner, the FL domino is a complete hob even with its single burner. It is possible to supply little power for a single-cup moka, or up to 5000 W to boil water or cook with a wok.

On FL cooker hobs, AE dual is even more flexible thanks to a twin-knobs system that allows to have the two completely independent crowns of flames.

### Sloped recess

The sloped recess conveys a modern, elegant touch besides facilitating the cleaning of the corners. A piece of highly refined workmanship to be found on both the KE and KS ranges.

# Ceramik

**CERAMIC GLASS** AND GAS. A COMBINATION OF ELEGANCE, PRACTICALITY AND SAFETY.

 Flat burners  
20% energy saving

The profile of the hobs is embellished by an elegant 2 mm bevelled edge that makes it slimmer and suitable for a refined flush-mount installation.

The Flat burners have a limited height and an accurate design that facilitates cleaning operations. They are embellished by the double finish with a satin-finish steel ring.

The knobs have been designed to be perfectly coordinated with the aesthetics of the burners.

## Much more than a tempered glass

The top of the Ceramik hobs is made of glass-ceramics and not of tempered glass, like most of the gas hobs of this type. This ensures a greater resistance to high temperatures, thus preventing any possibility of glass explosion.

# Features

## Easy-Clean enamelling

The Easy-Clean enamelling makes the internal oven surfaces and accessories non-adhesive, while the limited porosity ensures durability and easy cleaning.

## Soft-closing door

In the FL One Touch oven every detail is taken care of. The door's hinges automatically slow down in the final part of their movement, to achieve a delicate and silent closing.

## Extractable telescopic guides

Most of Foster ovens feature telescopic guides on three levels which improve space distribution and ensure easy and safe extraction of grids and pans.

## Stop Sol glass

The special screening and mirroring treatment of external glass gives the oven an elegant and modern aesthetic.

## Cooking chamber capacity

Foster ovens top their category for guaranteed capacity. **XL** means that those models feature a capacity exceeding 60 litres. **XXL** indicates ones with out-of-standard size.

## Multilevel cooking

The special ventilation makes the temperature uniform and avoids the mixing of smells, thus allowing to cook different kinds of food at the same time.

## Heat probe

It records the temperature of the product. Once the temperature has been set, the oven signals when the core of the food has reached it, and deactivates the heating elements.

## Self-Cooking

An extensive recipe menu is available and you can turn into a good cook in a short time. Those who are already expert cooks can create their personal cook book by memorizing the recipes.

## Removable glasses

The glass of the door of the oven can be removed for complete cleaning. In the picture the system of KE oven: the glass can be removed with a simple "click."

# Features

### Energy class

An oven range entirely in **A++**, **A+** and **A Class**. An important result which proves the high quality, targeted for performance and savings.

### Fast preheating

This function turns on the heating elements and a flow of hot air raises the temperature to 200°C within a very short time.

### Full-Glass door

In many models the inside of the oven door constitutes a single smooth glass surface making it practical for cleaning purposes.

### Anti-touch finish

The new ovens are offered with the innovative anti-touch finish which, thanks to its special protection, safeguards the steel surfaces from the annoying fingerprints.

### Thermal insulation and tangential fan

The tangential ventilation creates a flow of air between the muffle and framework, thereby reducing the temperature of the external surfaces. The oven does not expose furniture to temperature shock.

### Triple glass door

All Foster ovens are equipped with a multiple glass door (up to 3 glasses, 4 for the pyrolytic models). This device ensures low temperatures of external surfaces and lower heat loss.

# Multifunctional ovens cooking functions

The wide range of available programs allows Foster ovens to be performing in any situation: from delicate pastry cooking to the meat or pizza intensive ones.

- |   |  |
|---|--|
|  <p><b>Bottom cooking</b><br/>Suitable for heating foodstuffs.</p>  |  <p><b>Central grill</b><br/>Ideal for toasting or cooking small portions au gratin.</p>  |
|  <p><b>Upper-level cooking</b><br/>Suitable for cooking particularly delicate foodstuffs and for keeping them warm after cooking</p>   |  <p><b>Double grill</b><br/>Heat is generated by the upper grill only: ideal for toasting, cooking au gratin and browning foodstuffs and also suitable for meat, fish and pasta.</p>               |
|  <p><b>Traditional cooking</b><br/>The ideal function for all traditional recipes, including bread, cakes and roasts.</p>   |  <p><b>Bottom cooking + grill</b><br/>To complete static cooking and to cook au gratin simultaneously.</p>  |
|  <p><b>Ventilated cooking</b><br/>The combination of ventilation and circular heating elements allows for cooking different types of foodstuffs together, without mixing aromas and flavours.</p> |  <p><b>Bottom cooking + double grill</b><br/>To complete the static cooking giving the right crispiness to preparations.</p>  |
|  <p><b>Intensive cooking</b><br/>The upper and lower heating elements and the fan ensure rapid, uniform cooking. Ideal for cooking pizzas, roasts, lasagne and savoury pies.</p>                  |  <p><b>Fan + grill</b><br/>The combined action of the fan and grill produces rapid and thorough cooking of thick foodstuffs.</p>  |
|  <p><b>Bottom Cooking + Fan</b><br/>Programme that ensures limited energy consumption, ideal for heating foodstuffs or for foodstuffs that require delicate, gradual cooking.</p>                 |  <p><b>Fan + double grill</b><br/>For the final stages of cooking of foods such as roasts and poultry, to give the surfaces the right browning.</p>   |
|  <p><b>Fast preheating</b><br/>This function turns on the heating elements and a flow of hot air raises the temperature to 200°C within a very short time.</p>                                    |  <p><b>Defrosting</b><br/>Allows for thawing foodstuffs in one-third of the normal time through uniform distribution of the air at ambient temperature.</p>                                       |
|  <p><b>Keep warm</b><br/>Ideal to keep at the right temperature before serving.</p>   |  <p><b>Pizza function</b><br/>The combination of lower-level, ventilated and grill cooking allows for obtaining a crisp, optimally done pizza.</p>  |
|  <p><b>Low temperatures</b><br/>Program for a slow and gentle cooking at contained temperatures.</p>  |  <p><b>Grill+Spit</b><br/>The grill and spit combination produces perfect browning of foodstuffs.</p>   |
|  <p><b>Bottom + Ventilated cooking</b><br/>The combined action of the static heat from below and the ventilated one of the circular heating element, for deep cooking for thick foods.</p>        |  <p><b>Eco</b><br/>It cooks with minimal energy consumption. It uses forced convection heating and stops the operation a few minutes before the end of cooking, exploiting the residual heat.</p> |
|   |  <p><b>Bottom + grill + fan</b><br/>The uniformity of ventilated cooking accompanied by a crispy grill gratin.</p>  |

## Gas ovens cooking functions

-  **Ventilated and static gas cooking**  
The heat of the gas burner may or may not be accompanied by ventilation depending on the result to be obtained.

-  **Grill**  
Heat is generated by an electrical resistance on the upper level: ideal for toasting, cooking au gratin and browning foodstuffs and also suitable for meat, fish and pasta.

# Steam ovens cooking functions

The **S4001 combi steam oven** is a top-class product with excellent performances and great flexibility. It can be considered as a **gastronomic oven** thanks to a sophisticated technology deriving from professional solutions. Steam cooking is combined with convection and creates a complete set of programs ensuring excellent results for all dishes.

Here are the specialized cooking functions, which are added to the normal programs of a multifunction oven

**Professional cooking (combined steam-cooking)**

A mixed system combining the flow of warm air with steam to obtain tasty dishes just like a pro.

**Regeneration**

A programme specific for regenerating your dishes, using steam to replenish the proper humidity, combined with hot air between 70°C and 130°C.

**Pure steam**

The virtues of steam, to obtain a healthy and nutritious cooking. Perfect for all delicate dishes (vegetable, fish...) and for low-temp cooking (sous-vide or jar-cooking).

# Combi Micro oven cooking functions

Three different microwave solutions.

The new **S4001** and **KE Combi models** are complete ovens, which add to microwaves and grill also convection cooking, making it possible an incredible set of cooking programs.

So much convenience for **KS micro+grill**, perfectly matched to the many steel ovens.

**Microwave oven cooking**

Ideal for cooking or rapidly heating vegetables, rice, fish, meat and liquids. Different power levels are available.

**Automatic thawing**

Allows for thawing foodstuffs by setting the latter's weight and type.

**Convection microwave**

The movement of air generated by the fan ensures better homogeneity of micro cooking.

**Defrosting by time**

Allows you to defrost by setting the duration of the process.

**Micro+grill cooking**

A combined cooking method that is ideal for lasagne, potatoes, roasts and pies.

# Skin - multifunction blast chiller

The freezer preserves food but it is not suitable for deep-freezing. The blast chiller chills the product in a limited amount of time, enabling a micro-crystallization which preserves the organoleptic characteristics of food.

The FL blast chiller is simple and intuitive to use. Simple questions guide to set all parameters, even by a beginner.

The temperature probe is a useful accessory. It makes it possible to obtain a precise result at the end of the chilling or cooking process.

The blast-chiller and vacuum drawer are not only useful for conservation: they also allow the use of innovative cooking techniques, which thus become available also in your home kitchen.

## Skin blast chiller

multifunctional 60x46 - 40 litres

BLACK MIRROR

2980 601

- Built-in multifunction blast chiller 60x46 cm, volume 40 lt
- 11 programs
- TFT touch-control display
- Assisted intuitive programming
- Stainless steel chamber • LED lighting
- Over-temperature protection sensors
- Exercise temperature +75°C / -30°C
- Climate Class: SN

### Standard features:

Temperature probe - high-temperature glass tray - steel grid  
Power supply: 220-240V 50Hz - Maximum power: 300 W

## Blast chiller functions

### Temperature dropping to +3°C

It reduces the time of permanence in the bacteria proliferation temperature range, and increases the shelf-life of food. The quick drop in temperature also blocks water evaporation.

### Deep-freezing at -18°C

It makes months long conservation possible. The organoleptic properties, savour, aroma and aspect of food remain unaltered because of the micro-crystallization of water which prevents fibres from breaking apart.

### Rapid pre-chilling to optimize program-execution time

It reduces the time of execution of programs by chilling the inner parts of the appliance before use.

### Rapid chilling of food after cooking

It is possible to accelerate the chilling process, down to the required temperature, without waiting for natural acclimatization.

### Quick chilling of beverages to service temperature

This program quickly chills up to six bottles of beverage to the required temperature.

### 0°C conservation of prepared food

This program is suitable to preserve food such as meat, fish or vegetables for a few hours before their preparation.

### Raw food sanitization through temperature drop to -30°C

Bad conservation of seafood can cause health hazards do to contamination with Anisakis, a parasite which can be eliminated with a deep-freezing at -30°C.

### Controlled defrosting of deep-freeze food

The program brings food from deep-freeze temperature to 1÷3°C without losing its liquids and without commencing its cooking, and thus avoiding the transformation of proteins which is brought on by the microwave.

### Food regeneration at serving temperature

This program warms at proper serving temperature food which was pre-cooked and kept in the refrigerator.

### Low-temperature cooking

This function cooks food at a constant temperature for a given time. Thanks to the limited evaporation of water from the food, it maintains the quality and tenderness of the food.

### Rising with temperature- and humidity-control

This program creates a micro-climate with controlled temperature and humidity in which fermentation can take place in a perfect environment. By programming the duration, it is possible to reduce the quantity of yeast, and obtain a lighter and easier to digest food.

# Skin Vacuum Drawer

## The culture of healthy cuisine

The vacuum technique brings high-quality raw materials to your table, preserved with perfect hygiene and prepared in a quick and economic way.

## The real 99,9 % “sous-vide”

Foster's vacuum is based on the “bell” technology, the same used in professional appliances, which guarantees a very powerful vacuum (99,9%).

## Marinated products, maturation and infusion

The Chef Sous-Vide function “massages” the food and facilitates the absorption of seasonings. It replicates processes like marinade, meat seasoning or infusion.

## No waste of food

The set of optional containers is one of the few adapted to professional use. It is very useful to vacuum-seal foods and preparations which are prone to squashing.

# Skin Vacuum Drawer

<b>Skin Vacuum Drawer</b> 60x14	BLACK MIRROR	2981 601	€ 2.482,00	
------------------------------------	--------------	----------	------------	--

- Built-in professional Vacuum Drawer 14 cm
- Tempered glass cover with safety treatment
- AISI 304 stainless steel tub – volume 6,5 lt.
- Push-push opening on guides – maximum opening 44 cm
- Stop-system on the open position of the drawer
- Three levels of air extraction (vacuum up to 99,9%)
- Double-phase sealing bar with three sealing levels
- Bar length: 260 mm
- Maximum size of bags: 25x35 cm
- Chef “Sous-Vide” function for marinades, seasoning and infusion
- Mode for vacuum creation in external containers
- Touch-control
- Cycle duration: 1 minute approx., depending on food type
- Control Sensor for a guaranteed level of vacuum
- Automatic pump de-humidification cycle
- Electric safety-valve of no-return for the pump-oil
- Maximum absorbed power: 230 W
- Power supply: 220-240 V 50-60 Hz

## accessories

- Kit of 25 bags for vacuum-preservation 20x30 cm
- Kit of 25 bags for vacuum-preservation 25x35 cm
- Kit of 25 bags for vacuum-cooking 20x30 cm
- kit of 25 bags for vacuum-cooking 25x35 cm
- kit of 3 containers for professional vacuum

Ref.	Prezzo €
8502 003	€ 10,00

8502 005	€ 15,00
8502 006	€ 16,00
8502 007	€ 93,00

### Vacuum for solids and liquids

An important feature is that it can vacuum-pack also liquids. All your preparations can thus be put “sous-vide” to lengthen their shelf-life.

### Double-phase sealing

The sealing tool operates on a double phase, ensuring an always perfect sealing. The three levels of sealing permit the use of bags with different thicknesses.

### Three levels of vacuum

Not all preparations require a high degree of vacuum. Three different levels can be selected, plus the sealing function without air extraction

### Preserve in easy-to-use mono-doses

The vacuum process makes it possible to spare time and money. One can cook multiple portions and vacuum single-dose jars directly in the appliance.

# A hood for every kitchen

## Wall-mount hoods

A large range of choices in size, shape, materials and functionality.

## Island hoods

For many models an island version is available, easy to install thanks to telescopic chimneys.

## Ceiling-mount suction systems

Not mere hoods, but complete ventilation systems, engineered to improve the quality of the air.

## Table hoods

Elegant and minimalistic solutions which perfectly match the Domino and In-line cooker hobs, both gas and induction.

## Built-in hoods

These special solutions are craftily studied to disappear within the kitchen cabinets, nevertheless maintaining their own personality and functionality.

## Custom-made hoods

Foster is able to manufacture bespoke products according to the customer's drawing, guaranteeing the best match between worktop and cooker hood.

## Lighting

Particular attention to energy saving with LED lighting systems. They assure a 10 times lower consumption and a 10 times longer duration. Our LED lights are designed to create an adequate comfort and safety in the cooking area.

### LED colour temperature selector

The colour temperature of the Breeze hood can be changed according to the environment in which it is inserted, so you can choose among a warm, natural or cold light.

### LED Strip

The Ghost table hood is equipped with an LED strip that guarantees an extended and homogeneous illuminated area, despite the proximity of the source to the hob.

### LED lighting plates

The Modular ceiling suction system is conceived to be able to be the kitchen main lighting source. It features high power, efficient LED lighting plates which guarantee a natural and comfortable lighting, while granting a considerable energy saving.

### Colour temperature

The colour of light is very important for the welfare of a long living room like the kitchen. The LED lights of Foster hoods are neutral lights with a temperature close to natural light, particularly comfortable.

## Silent power

Power and quietness are the two principal features of a cooker hood, even though they are often in contrast with one-another. All the Foster solutions have an outstanding suction power which makes them efficient and well-performing in all conditions of use, both in extracting and filtering modes.

### High performance motors

The motors Foster hoods have a high suction capacity. Their refined design hides a powerful appliance with professional features.

### Silent System motors

The new Silent System motors sport a very high efficiency leading to top suction-power coupled with reduced consumption and a noise-level 10 times lower compared to standard solutions.

# Filters

All the Foster hoods are, in their original configuration, suction hoods, and are equipped with grease, beehive, multilayer, anodized aluminium filters. Wherever it is not possible to install a suction hood, the addition of active carbon filters (available as accessory) can transform the hood in “filtering” hood.

**Remark:** the grease filters can periodically be washed in the dishwasher in order to bring them back to their original filtering efficiency. It is however recommended to use a low-temperature programme (max. 40° C) to avoid any deformation and colour-change of the aluminium surfaces.

## Digital control

Almost all Foster hoods are equipped with advanced electronic controls that allow a perfect control and improve the efficiency of the engines. The different solutions favour the aesthetic or functional aspect with additional functions such as digital thermometer and the timer, always useful for keep control of your preparations.

### Remote control

The ceiling suction systems and the Maya hoods are equipped with a remote control to easily activate all their functions from any position.

### Stainless steel filters

In many models, especially the ones where the filter is in plain sight, the aluminium filtering element is covered in stainless steel. This solution improves the look and increases the durability of the product.

#### Standard stainless steel filter

It guarantees an excellent filtering function, thanks to the double stainless steel filtering layer, and as many as five layers of aluminium beehive structure.

#### Hi-class stainless steel filter

It features a peculiar and elegant look, as well as heightened filtering power due to the seven-layer structure.

### Perimeter suction

The perimeter suction is a feature common to many Foster hoods. The filters are hidden by steel- or crystal plates and the suction occurs along their perimeter. This has aesthetic advantages but also functional ones: the cleaning is easier, the suction power and noise-level are improved. The depression which occurs in the perimeter area facilitates in fact the suction of the particles composing the fumes.

# Special functions

### Auto Mode function

With the Auto function the hood has temperature sensors and it can automatically set the suction power according to the heat developed by the cooker hob underneath.

### Off-Timer

All the models with electronic interface can be programmed to turn off the suction at a postponed moment, so as to prolong the aeration of the room even after the cooking has been completed.

### Filter-cleaning alarm

This function keeps track of the hours of use of the hood and signals the need to wash the filters in order to maintain the perfect efficiency of the hood.

### Brushless motor

State-of-the-art Brushless motors allow high air flow rates while maintaining a low energy consumption. Furthermore, they have an almost never-ending duration.

### Swiveling or four-exit-position motors

Swiveling or four-exit motors are flexible systems that allow an easy installation, in any situation.

### Thin encumbrance

Foster ceiling-mount ventilation systems require little space. The icon appears next to models that require less than 20 cm between the concrete ceiling and the countertop.

### 50 cm distance

This hood is approved to be inserted even at a much lower distance than normal from the floor, up to 50 cm, all to the benefit of its suction efficiency.

# Choice suggestions

The correct choice of power and kind of installation are important in order to achieve good performances, efficiency, noise-level and consumption. In order to avoid possible mistakes when buying, we list hereafter some suggestions to make the choice easier.

### Choice of the flow capacity

The suction power of the hood must be correctly dimensioned compared to the volume of the room in which it is installed, in order to ensure a correct air circulation. The optimal air flow can be calculated by multiplying the volume of the room by 12 (number of complete air volume replacements in one hour). For ceiling suction systems it is recommended to calculate an air replacement of 15 cycles/hour.

$$\begin{array}{c}
 \boxed{\text{m}^2} \quad \times \quad \boxed{h} \quad \times \quad \boxed{12} \\
 \text{Kitchen area} \quad \text{Kitchen height} \quad \text{Number of complete air replacements} \\
 \text{per hour} \\
 = \\
 \boxed{\text{m}^3/h} \\
 \text{Air flow (necessary suction power)}
 \end{array}$$

# Choice suggestions

## Positioning on the cooker hob

The optimal height above the cooker hob is 65 cm and anyway comprised between 60 and 70 cm. For wall hoods with inclined suction surface (Garage hoods excluded), this height is determined starting from the median point of the filtering area.

For the ceiling systems a ceiling-panelling height of maximum 150 cm from the cooker hob is recommended. The fixing systems of the hood makes it possible to regulate the distance between ceiling and panelling, based on specific needs. \*See min. and max. dimensions for each specific model.

## Width of hood

The dimension of the hood must be adapted to the size of the cooker hob underneath. A slightly larger hood compared to the hob will ensure an optimized suction.

## Placement of pipelines

It is advisable to foresee extraction air ducts as straight as possible, without bends or corners. A tortuous extraction duct will determine a loss of suction power and therefore a less-than-optimal performance. Moreover, it is important not to connect the air exit-duct with chimneys of other appliances or heating boilers.

Connect the outlet for the air extracted by the hood to fumes discharge ducts with a suitable internal diameter, and no less than 120 mm.

## Air currents

In order for the hood to perform efficiently it is important to position it in a place not subject to air streams.

# Canalization systems

Space-saving channel system with rectangular section.

For ceiling hoods **Breeze** and **New Sky** and for the extractor hobs **Foster Milano AIR**, **Milanello AIR** and **Domino AIR**.

## DISHWASHERS

**Programs:** in the Foster range you can choose freely between sets of practical and essential programs or a complete sophisticated programming suited for every individual need.

**Half Load:** saving time and energy with the half-load setting. Available on all programs.

**Acquastop:** stops the water supply and prevents leaks and overflows at source. It is a standard equipment on all models.

**Delayed programming:** It is possible to program a delayed start of the dishwasher, and thus to optimize the energy consumption during the day.

**Adjustable basket:** the upper basket is simple to adjust in height, even when fully loaded. This allows better space management according to washing needs.

**Tabs "All in 1":** this option guarantees perfect results with all kinds of detergent. Once it is activated, the washing cycle is adapted to the practical "all in 1" Tabs instead of the regular detergent.

Compatible with KP Plus and Elettra dishwasher.

# The custom-made products of Foster: stainless steel worktops

The custom-made products are among the most distinctive Foster productions.

To learn all the customization possibilities, in stainless steel and in composite materials, please check the relevant documents of the Companies of the **Foster Group** specialised in on-demand manufacturing:

[www.bautek.it](http://www.bautek.it) and [www.fostersurfaces.it](http://www.fostersurfaces.it)

One material, many different looks, thanks to the proposal ranging from the classic satin finish to the new rough and matt finishes and the "worn" look of the Vintage finish.

- Several finishes.
- Multiple profiles and thicknesses.
- Self-sustaining supports.
- Infinite solutions for each specific need.

A custom-made Foster worktop means also the safety of a top-grade traditional craftsmanship and of one manufacturer taking care of the whole product.

Also the out-of-sight parts are important. All our worktops are manufactured with first-grade raw materials and have an internal structure that makes them self-carrying.

## How to clean steel

Stainless steel products do not need any particular servicing. However, they do require a certain care and use of adequate detergents for daily cleaning. By and large, **all that's needed is to wash with hot water and soap or hot water and vinegar**, and thoroughly rinse and dry with a cloth. Do not use: hydrochloric acid, abrasive powders, steel wool, brushes and products for cleaning silver.

When it comes to detergents for cleaning steel, Foster recommends the products in the "Steel Clean" line:

- **microfiber cloth** to wipe off traces of grease and powder.
- **professional cream** to restore the original splendour of the steel, remove scaling, stubborn dirt and rust marks caused by contact with ferrous materials.

**Steel Clean - cream**
